Assignment 1

Due, Thursday, May 31, 2020 for 100% credit

Friday, June 1, 2020 for 90% credit

Saturday, June 2, 2020 for 80% credit

Sunday, June 3, 2020 for 70% credit

Scenario

You have started your own business in a traditional brick-and-mortar facility and you need to develop a website. The website will be developed in stages. Each assignment represents an upgrade to your website.

Assignment 1

1. Create a website with three pages
 - a. Home page (index.html)
 - b. Products or Services page
 - c. About us/Contact us page
 - d. Inline elements: the site must include a minimum of 10 of the 28 possible inline elements
 - e. Block-level elements, the site must include a minimum of 10 of the 29 possible block-level elements
 - f. At least half of your included HTML elements must use attributes (not including the **style** attribute)
2. Each page should include the following
 - a. `<!doctype html>` declaration using HTML5
 - b. Navigation for the entire website with functioning links (`<nav>`, `<div>`, `<ul>`, etc...)
 - c. `<head>` section that implements the `<title>` element
 - d. `<body>` section
3. The website should include relevant information such as
 - a. Block level tag elements describing the Website (heading, paragraph, blockquote, div, address, etc...)

- b. The company's name, address, city, state, zip, phone number(s), fax number, point of contact, hours of operation (pseudo information is okay)
 - c. Display a list (, , or <dl>) of the services or products your company offers
 - d. Images of products or services offered ()
 - e. A video
 - f. Inline elements (image, bold, italics, etc...)
4. Comments as necessary; recommend commenting the different pages and section of the website also include author name and date developed

A screenshot of an HTML editor interface. On the left, there is a vertical scrollbar. The main area displays two lines of code. The first line is `<body>` in blue text. The second line is `<!-- Start page container -->` in green text. The green text represents an HTML comment.

```
<body>
<!-- Start page container -->
```

Figure 1 Comment is in green font

5. The directory structure of the website must be in good form:
- a. Parent folder of the website has the index.html file only, see figure 2
 - b. An html folder for all other pages of the site, see figure 2
 - c. An images folder for all images, see figure 2
 - d. Pathing must be relative not absolute, see figure 3
